

Lock it Down with JT's Strong Arm Jack Stabilizers

By using the proper clevis and swing bolt, JT's Strong Arm Jack Stabilizers easily connect to and stabilizes any of these jack systems.

JT's Strong Arm Jack Stabilizers connected to an electric jack

JT's Strong Arm Jack Stabilizers connected to a scissor jack

JT's Strong Arm Jack Stabilizers connected to a telescoping jack

Enhanced Comfort and Stability

Most 5th Wheel and Travel trailers use one of the three main types of jacks for leveling. The problem is not the rig, but the jacks. Until now, all of the so-called solutions to unwanted chassis movement have addressed the symptoms rather than providing a cure. Is there an answer to this years-old problem? You bet. **JT's Strong Arm Jack Stabilizer™** system. You've tried all of the so-called solutions that *don't* work, now try the one that does!

Put an End to Unwanted Chassis Movement!

With

JT'S STRONG ARM JACK STABILIZERS™

- One-time permanent installation
- Nothing to tear down or stow away
- Easy to set up: telescopes into place when jacks are lowered
- Bolt-on DIY installation

Everyone who owns a 5th Wheel or Travel Trailer knows that some side-to-side or front-to-back movement is expected; annoying, frustrating, unwanted...but expected.

That is until *now...*

JT's Strong Arm Jack Stabilizer™ system is a one time, permanent installation that virtually eliminates the unwanted chassis movement in 5th Wheel and Travel Trailers and eliminates the need for ineffective tripods. This patent pending universal system contains six stabilizer tubes in each kit: Four go on the front of the rig and two on the rear. It's a bolt-on kit, designed for the do-it-yourselfer!

The Power of Triangulation

Like a rock-solid racecar chassis, JT's Strong Arm Jack Stabilizers use triangles – the strongest shape in nature – to eliminate chassis movement. One end of each stabilizer tube attaches to a leveling jack and the other end to the RV frame, forming a rigid triangle. There's no welding required and no need to remove and reattach during set up. It's permanent! When parked, JT's Strong Arm Jack Stabilizers telescope into place with the jacks. Once the RV is leveled, twisting the "T" Handles locks the system in place. It's that simple!

Easy Installation on All Types of Jacks

Using a unique system of custom designed and engineered clevises, swing-bolts and mounting hardware enable JT's Strong Arm Jack Stabilizers to attach to and stabilize any of the three main types of jacks found on RVs: Scissor, Electric and Telescoping.

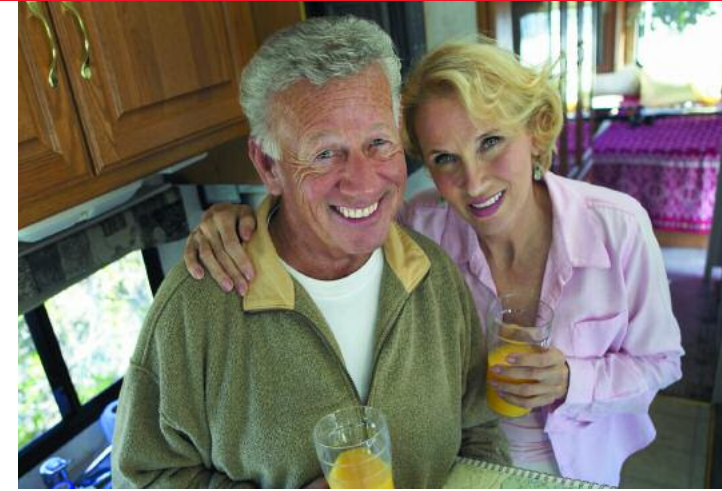

Typical rear installation of JT's Strong Arm Jack Stabilizers installed on Scissor jacks requires that the stabilizer tubes angle toward the center of the rig as much as possible to stop side-to-side movement.

Why is This Couple Smiling?

They've found the solution to their problem. JT's Strong Arm Jack Stabilizer system has stopped their RV home from moving. No more leaning, swaying and swinging. He can get up in the middle of the night without disturbing her, and she sleeps comfortably. She moves around in the afternoon while he naps. It's a wonderful thing, and worth smiling about!

Make Your RV Rock-Steady

No one wants an RV that, sways like a boat. We've got the solution that you've been looking for. Make your RV rock-steady with JT's Strong Arm Jack Stabilizer system. Order yours now! Call (toll-free) 1-888-587-JTRV (5878) or online at www.jtrv.com.
